TWENTIETH ANNIVERSARY

RAINBOW LINE

"Rivaled only by the Rainbow"

NEW AND IMPROVED
STRUCTO TOYS

THE CHIEF

This is the "Chief" and so named because it is the finest train with a large four-wheel locomotive anywhere on the market today. The train, consisting of Locomotive, Combination Mail and Baggage Car, Pullman and Observation Cars, is six feet in length. With its long low sweeping lines in its true to life design this wonderful train is a revelation to both young and old.

The equipment consists of Locomotive No. 4677 with the Triple Action Remote Control, is 17 1/4 inches overall, and is equipped with the famous Twin Reversible Headlights, large pantograph, bell, hand-rails and ladders, all finished in polished nickel. Its further decoration of brass journals and air tanks make it exceptionally attractive.

Combination Mail and Baggage Car No. 4080, features four sliding doors and two interior electric lights and vestibule diaphragms. Also equipped with our No. 4122 automatic Mail Bag Catcher and bags.

Pullman Car No. 4081 and named "Washington" has many exclusive features such as swinging vestibule doors that close automatically, vestibule diaphragms and three interior electric lights.

Observation Car No. 4082 and named "Valley Forge" with polished brass platform railing, illuminated platform train sign, platform dome light, which indirectly lights the red and green rear and side lights. The interior is lighted with two additional electric lights.

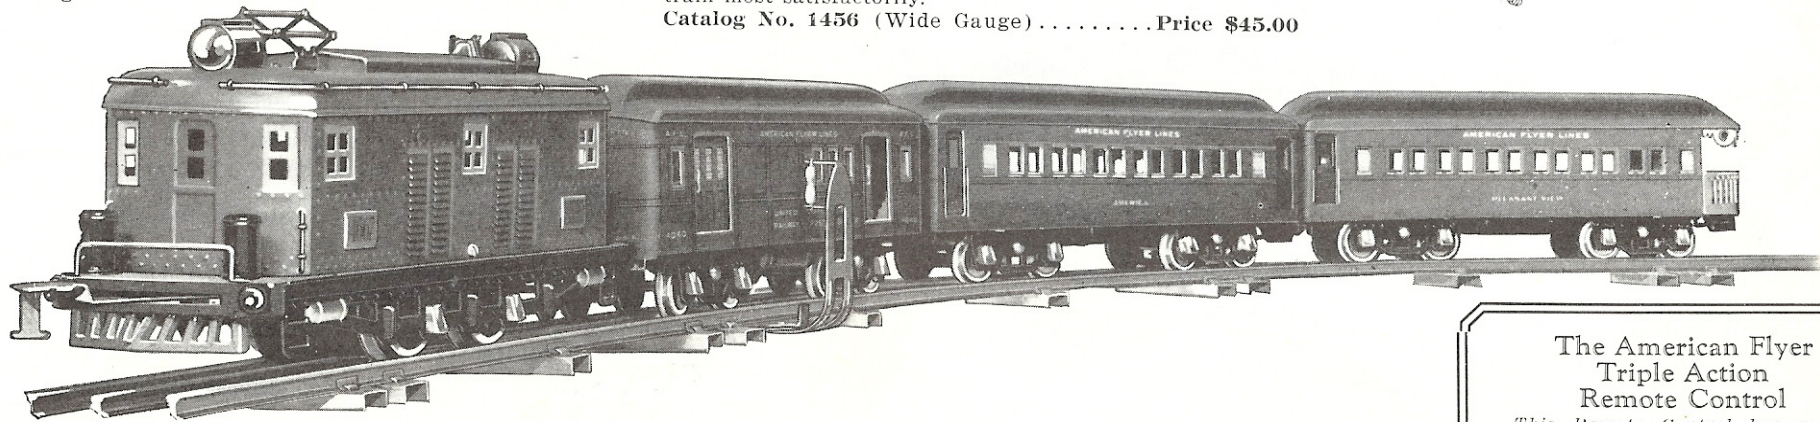

All cars are 19 1/2 inches long not including couplers. Car bodies are mounted on the famous American Flyer three point suspension trucks which permit excess speed on curves. They are made of heavy gauge steel and are lithographed with a splendid tan color richly displaying rivets, car names, window trimming and striping. Air tanks and battery boxes are finished in black baked japan. Steps and journal boxes are in brass.

Track equipment consists of eight pieces curved track and eight pieces straight track together with the necessary binding clips and track terminal connection, making an oval 20 feet in circumference.

Carefully packaged into one large carton, including full setting up instructions. Weighs 29 pounds.

We recommend our 100 watt transformer to operate this train most satisfactorily.

Catalog No. 1456 (Wide Gauge).....Price \$45.00

THE AMERICAN LEGION LIMITED

A new train, with the American Flyer Triple Action Remote Control and beautifully decorated. This 62 inch long train consists of the Locomotive, Combination Mail and Baggage Car, Pullman and Observation Cars, all of which are finished in a brilliant red.

The equipment consists of Locomotive No. 4667, with Triple Action Remote Control, is 15 inches long and is equipped with our famous twin reversible headlights, large pantograph, bell, hand-rails, all of which are finished in polished nickel. It is further decorated with handsomely designed brass journal boxes, air tanks and number plates.

Combination Baggage and Mail Car No. 4040 has two interior electric lights, four sliding doors. It also has the fascinating accessory—the No. 4122 Mail Bag Set and Bags which are picked up on the fly, just as on real crack trains.

Pullman Car No. 4041 named "America" has two interior electric lights and swinging vestibule doors that close automatically.

Observation Car No. 4042 named "Pleasant View" has one interior electric light and one in platform dome, and polished brass platform railing. The swinging vestibule doors close automatically.

terior electric light and one in platform dome, and polished brass platform railing. The swinging vestibule doors close automatically.

All cars are 14 1/2 inches long not including couplers. They are handsomely lithographed in a brilliant red with a mass of detail such as the steel side plates, rivets, car names, striping and window trim. Brass journal boxes greatly increase the attractiveness of these cars. All cars have automatic couplers which are exceptionally strong and strictly automatic in action.

Track equipment consists of 8 pieces of curve track, 6 straight and the necessary binding clips and track terminal connection making one oval track 21 1/2 inches in circumference.

Complete train set securely packed in a single carton together with full setting up instructions. Weighs 28 3/4 pounds.

We recommend our 100 watt transformer to operate this train most satisfactorily.

Catalog No. 1436 (Wide Gauge).....Price \$35.00

**The American Flyer
Triple Action
Remote Control**

This Remote Control has a triple combination of features that are exclusive with the American Flyer. For the first time you are offered all the fun of real train control in this new American Flyer equipment.

First—the unusual feature of stopping a train and when it again starts having it back up.

Second—when traveling in a forward direction you may stop the train and upon starting again, it will continue in the same forward direction.

Third—if the train is backing up you may bring it to a dead stop and upon starting again it will continue to back up.

See this wonderful improvement—try it—and then you'll know what fun it is to play with a completely equipped and well-built train, that is under absolute control at all times.
